

Revenue & Margin Assurance Service

RAMA – Datasheet

Gross Margin calculations by Meter / MPxN

Portfolio level MI for Gross Margin, settlements costs and unbilled accounts

Settlements charge breakdown

Bottom-up settlements charge calculation¹

Imbalance (Settled vs Billed volume) by Meter / MPxN

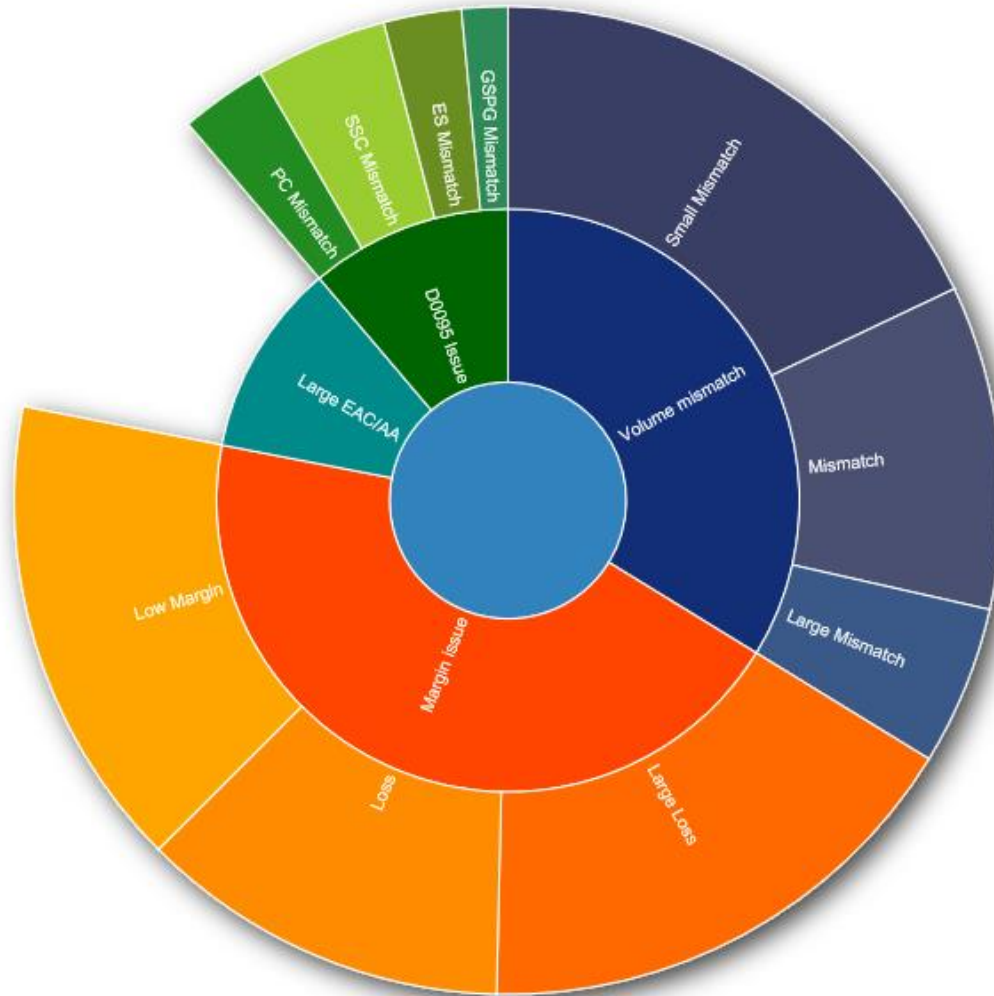

Engage bespoke NHHDA extract²

Dynamic meter tagging rules to identify business issues

Creation of billing data extracts

Consultancy to support your RAMA implementation and provide knowledge transfer

1. Wherever possible, charges such as DUoS and TNUoS are modelled based on industry rules and published standing data. Other charges which are not directly attributable to a meter / MPxN must be modelled and smeared.
2. Using a bespoke NHHDA extract exclusive to Engage allows RAMA to reflect what actually goes into the electricity settlements process. This avoids a typical but flawed approach of using D0019 data to build the settlements picture.

Welcome to RAMA

RAMA for Gas

Enter data, review file loads and analyse Gas calculations.
